

Press release

A new era for VERT: Vertual Ltd. announces that their world leading “flight simulator for Linacs” has become compact, mobile, and customisable.

July 2nd, 2020

Vertual Ltd, a UK based company and provider of VERT, the flight simulator for Linacs, announces the release of Compact VERT. Compact VERT builds on the highly successful Immersive and Seminar VERT systems installed at over 150 institutions in 32 countries and offers another option to customers where a VERT simulation system is desired, but space is minimal, or budget limited. This will enable more institutions to benefit from using the VERT software for teaching students, training staff, informing patients, teaching allied health professionals, and raising awareness of complex radiation therapy techniques through outreach activities.

About Compact VERT

Compact VERT is a mobile, self-contained, and flexible VERT solution with 3D visualisation included. The system, supplied in a self-contained cart, provides the flexibility to move teaching and education sessions from one room to another, ensuring the system is available wherever it’s needed and because a dedicated room is not required, there are no installation costs. Compact VERT is available in three functionality levels and price points; Compact VERT, Compact VERT Plus, and Compact VERT Ultimate. Vertual will offer guidance to help customers decide which level is suitable for them based on their teaching requirements and budget. Also, an upgrade path is available to enable customers to increase functionality and upgrade to the next level.

Vertual has an ongoing hardware refresh program for customers who have older hardware or need an operating system upgrade. Compact VERT is offered as an add on for existing customers, either to replace the current equipment while keeping 3D capability, or to add more capacity in a flexible format.

Debra Leeves, CEO Vertual Ltd. says “Although VERT systems are becoming the go-to solution across the world for teaching radiation therapy in a simulated environment, it’s sometimes a challenge for those who want the systems but don’t have the space or the budget. Additionally, there are those who want to use VERT but need the flexibility of teaching their students on split sites, and there are numerous healthcare professionals who want to inform their patients about upcoming treatments using VERT in a smaller more intimate room We listened carefully, became inspired with the multitude of uses for the VERT system and rose to the challenge to develop Compact VERT.”

Compact VERT is designed for smaller spaces and audiences than Seminar and Immersive VERT systems and will help reach more users worldwide.

About Vertual Ltd

Vertual Ltd. is the leading provider of virtual reality training systems in radiation therapy and is located in Hull, UK.

The company was formed in 2007 by three founders as a spin-off company from a joint research project involving Hull University and Hull and East Yorkshire hospital trust. In 2008 the company embarked on a program to develop international markets for its products. VERT has since been adopted at over 150 centres in over 30 countries.
